West Airpinch- Valves with Unrestricted Flows and Applications

Totally resistant to corrosion and capable of handling all liquids, steam and dry flowables, The West Group introduces its range of Airpinch Valves.

Full, unobstructed high flow is a major feature of each unit employing the use of replaceable sleeves within a spring and seal free normally open housing.

A wide selection of both sleeve and body materials enable the end user to obtain compatibility for use upon the most aggressive and corrosive of liquids, flowable food stuffs and compounds:

Positive shut off of the Air Valve is achieved by applying an air or liquid signal to the control inlet, the introduction of a pressure regulator to the control inlet will provide for proportional opening or closing of the valve orifice.

West Airpinch Valves are lightweight, compact in size and economically priced, they can be installed submerged or in any orientation without affecting their operating performance.

The valves have an operating pressure of 6 bar (90 psi) and are capable of withstanding media temperatures of minus 70°C to plus 250°C.

Please contact The West Group for Technical information and free Airpinch catalogue:
