

ONE-PIECE, ONE-SIDED & ONE-UP

An award winning, revolutionary one piece compressed air preparation unit is introduced by The West Group Ltd. Identified as the 'One' and manufactured in Italy by Metalwork Pneumatic it provides the end user with a host of features and benefits not previously available.

The 'One' provides a single unit housing containing threaded ports, condensate drain, pressure regulator, shut off and dump valve, soft/start valve, pressure switch, three supplementary air intakes and a pressure gauge.

A common body size accommodates a range of port threads from 1/4 to 1" BSP, filtration with semi or fully automatic drain is offered to 5 or 25 microns. A visual filter condition monitor is fitted as standard. Many safety features are included, such as lockable pressure switches, shut off valves and soft start controls.

The 'One' Air System is easily maintained as the entire user interface is at the front of the unit which means that everything is visibly and fully accessible including the filter cartridge which is also replaced from the front.

Users of the 'One' can select from 3 pressure ranges of 1-2 Bar, 1-4 Bar and 1-8 Bar with flow rates of 4000 nl/min at 6 Bar. The compact housing dimensions of the 'One' at only 180mm in length x 140mm in width show considerable savings in weight and space over conventional units.

In adopting the 'One' set of components the air preparation unit is highly competitive in price and offers a unique and versatile answer to the efficient treatment of compressed air whilst maintaining a high regard to safety.

A free descriptive 25 page catalogue on the 'One' unit and technical assistance is available from The West Group Ltd:
