

Value Plastics – For the Right Connection

Regarded as a leading global manufacturer of precision moulded connectors and fittings, Value Plastics announce the introduction of a new 80 page catalogue featuring their products. The catalogue contains scale drawings of each component, together with performance characteristics, chemical resistance and other supporting products.

The Range embraces over 400 configurations available in more than 2800 differing styles and material choices designed for use in low pressure fluid management systems, the products are ideally suited for use with flexible tubing within the size range of 1.5mm (1/16") to 25.4mm (1") inside diameter.

Being precision moulded and flash free, Value Plastic products are widely used within the most demanding applications including, Healthcare, Research and Light Industrial Applications.

Standard materials used include Nylon, Polypropylene, Kynar, Polycarbonate and Radiation Stable Polycarbonate.

Amongst the many styles of fittings are Luers, Tube to Tube, Reducers, Y's, Tees, Elbows and Threaded Fittings, many of which can be autoclaved and used within radiation environments.

Design Engineers involved in research and development will find the Value Plastics bondable series of fittings of interest, this range enables manifolds, check valves and fittings to be freely created to match individual requirements.

Free samples and the latest Value Plastics catalogue are available from The West Group Ltd - the exclusive distribution agent for the United Kingdom and Ireland.
