

Job Title: Design Engineer (Value Added Projects)

Opportunity:

An excellent opportunity in a growing and fast paced engineering environment for an enthusiastic recent graduate of an engineering discipline. A chance to apply what they have learned throughout their studies, this varied role will enable the graduate to build and develop their knowledge and skillset in areas such as computer aided design, technical drawings, engineering analysis and project management.

THE WEST GROUP LIMITED

Job Role:

Reporting to and taking direction from the Engineering Manager and working closely with the Manufacturing, Production and Quality Departments, the Design Engineer will maintain an awareness of department objectives, targets and measurements, assisting in the delivery of those targets through the effective development, management and implementation of new value added engineering projects.

The main purpose of the role is to assist all aspects of project management and process development within the technical department, in accordance with the business long term strategy, whilst always minimising cost, maintaining robust process and ensuring exceptional product quality.

Technical Responsibilities:

- Take ownership for the development, management and implementation of new engineering projects to complement existing West Group product portfolio as directed by the Engineering Manager.
- Working within the SolidWorks environment, produce 3D models and 2D technical drawings of new engineering products and concepts.
- Project support from concept to delivery in a high quality, timely and profitable manner.
- Support change requests to engineering projects and update the required documentation. •
- Generation of assembly and test procedures for new concept assemblies and piece parts. •
- Manufacture and assemble development prototypes as required. •

Technical Support:

- Management of Engineering budgets and expenditure. ٠
- Train/coach operators in use of production equipment and processes. •
- Work with all departments to ensure customer requirements are fully scoped and delivered.
- Review existing practices, products and processes to increase productivity and reduce cost. •

General Responsibilities:

- Visit and liaise with suppliers and customers as needed. •
- Maintain and report on project plans and mandated process documentation.
- Conduct risk assessments at the beginning of each project and update as circumstances change.
- Technical drawing checking and approval where required.
- Any other task that may reasonably be required to meet the needs of The West Group Ltd within • the remit of this post.
- Act as an ambassador for the company, promoting a positive image both internally and • externally, demonstrating support of our strategic direction.

THE WEST GROUP LIMITED Design & Supply of Fluid Control Solutions & Components

Required Job Skills:

- Engineering knowledge stemming from an apprenticeship served or university degree.
- Understanding of material selection.
- Understanding of fluid mechanics, solid mechanics and statics.
- Understanding of the specification and application of Pneumatic components and systems would be a distinct advantage.
- Experienced in the use of 3D CAD systems (ideally SolidWorks).
- Understanding of engineering standards and work instructions.
- Familiarity of manufacturing practices and designing for manufacture.
- Ability to quickly gain an understanding of new concepts and design intent.
- Good project management skills.
- Personable, team worker, quick to learn and then work independently.
- Strong written and verbal communication skills
- Basic understanding of electrical and electronics would be a distinct advantage.
- Familiar with standards, ISO9001, ISO13485 and BS8888.

You are required to adhere to the company standard terms and conditions of employment and to be aware of your duties as an employee of the company with regards to the quality management system, general standards, health and safety and confidentiality.
