

The West Group Ltd

Your partner in **medical** and **life science** fluid components and solutions

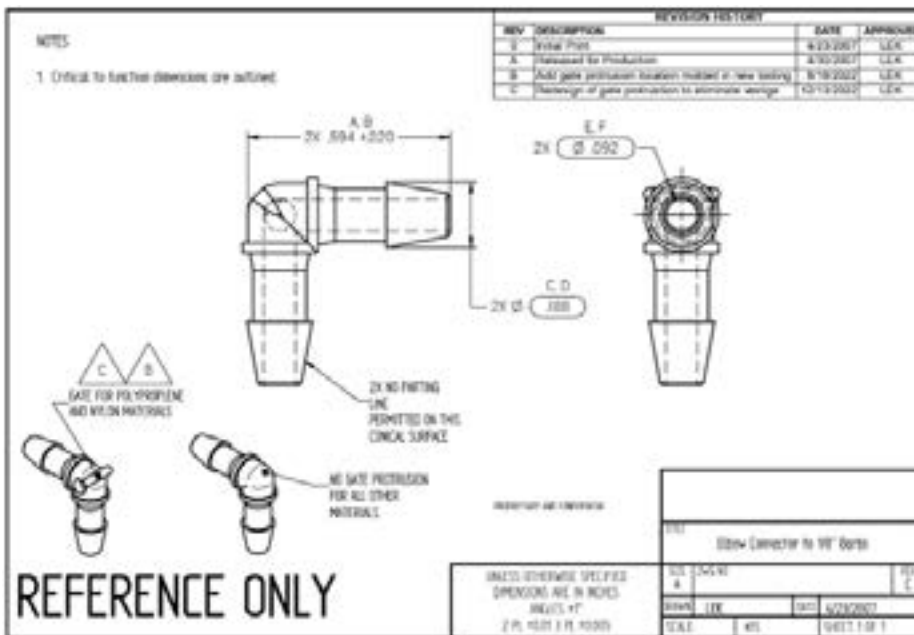

PCN Date	PCN Number	Date of Implementation
December 2022	0832	Effective Immediately

Affected Part Number/s

E-F-160203 and E-F-210292

Change Description

In response to ever-increasing demands for quality products and services, the manufacturer of this part is introducing higher-capacity tools. The process for manufacturing this product will have minimal change. While the mould base/inserts will be identical in specification with the equivalent moulding press, industry standard checks will be required to verify the 1:1 change. The upgraded injection point or gate requires a protrusion to allow for higher cavitation.

Verification and validation will consist of a limited re-qualification to confirm there will be no change to form, fit or function.

Contact Information:

Please feel free to contact your Business Development Manager if you have any concerns about this change. We will be happy to provide samples and/or data sheets of these products and work with you to provide any solutions.
